

Animal Behaviour Live

20-21 Aug

Survey

Thank you for your abstract submission. We are now offering you to answer a survey. To make sure of the effectiveness of our principles to design an open and inclusive conference, we are interested in the demographics of our participants. This survey will document abstract submission and selection. Our surveys will (i) document the efficiency of our designing principles, (ii) will provide material for reflexivity, that is an opportunity to improve diversity and inclusiveness and (iii) be shared publicly for other conference organisers to experiment new formats with us.

Data submitted in this survey will help us documenting the demographics of submitters. This survey is optional and the data entered in this section won't be linked to the data provided during abstract submission. Data will thus be completely anonymous. We will use this data to improve our knowledge regarding the audience reached for abstract submission, especially in terms of sociological minorities. This data may be used later on, under the form of global statistics on our website or in scientific articles or presentations to document the effectiveness of our format and communication methods. This data won't be shared to other party. Similar survey will be conducted with the audience attending the conference.

Current Position :

- Master's student
- PhD student
- Postdoctoral researcher
- Assistant/ Associate Professor
- Researcher
- Professor
- Research assistant
- Lecturer/ Senior lecturer
- Other :

Gender:

- Female
- Male
- Prefer not to say
- Other:

To what extent do you reckon belonging to an under-represented group? An under-represented group describes a subset of a population that holds a smaller percentage within a significant subgroup than the subset holds in the general population (e.g. women and individuals from some racial and ethnic groups are under-represented in science compared to the nation-wide demographics of the USA, Valentine and Collins 2015 PNAS).

1 2 3 4 5 6 7 8 9 10

I don't feel represented at all I am part of the norm in the scientific community

Many factors (such as child care, belonging to under-represented groups or to a not well funded institution, ...) may prevent opportunity to share your work worldwide. To what extent do you reckon having access to the international community of animal behaviour, for instance thanks to participation at conferences?

1 2 3 4 5 6 7 8 9 10

No access at all I am a well exposed researcher

Age:

- Under 25 years old
- 25-30
- 30-40
- 40-50
- 50 and above

Country of residence

I have read how my data will be handled.
